MOBILE SERIES

AUTOMATIC GATES

As population growth exerts pressure on commuter transport systems in cities around the world, the need to optimise throughput in high traffic volume environment and maximise fare collection becomes important.

The **TITAN™** Mobile series Automatic Gates with their state-of-the-art hardware answer that need. Built with all the key advantages of a robust fare collection system, they offer high reliability and allow for low maintenance.

INTELLIGENT FARE SYSTEM

FAST PROCESSING

- User-friendly access gates are designed for fast processing of passengers in and out of designated transit areas
- Uniquely designed without a barrier system and sensor logic system so as to achieve high passenger flow and allow easy maintenance

COST EFFECTIVE

- Modular system means minimal maintenance downtime and manpower requirements as replacement of units can be done on-site

FULLY MOBILE AND ALLOWS STANDALONE

- Compact and light-weight gate cabinet design makes it easy to transport to any location upon request
- Able to configure as standalone for easy set-up at ad-hoc events that need to accommodate large crowds
- Able to operate as standalone and hold up to 50,000 transactions in the data-base storage

HIGH DURABILITY

- High-grade stainless steel gate cabinets do not corrode or blemish easily and can withstand the demands of a high-volume environment

USER COMPATIBILITY AND CUSTOMISABILITY

- Open source Operating System (QNX) allows for easy integration with existing applications and future system upgrades
- Configurable for various ticketing needs and can interface with many security systems

ERGONOMIC DESIGN

- Top panel display is angled to enhance visibility in crowded environment

ENVIRONMENTALLY-FRIENDLY

- Recyclable synthetic materials are used
- Lead-free electronics, energy efficient light-emitting diodes (LEDs), servomotors and LCD displays minimise energy consumption

SUITABLE FOR

Transport companies
Theme park operators
Facilities requiring access control, with or without fare collection
